Senior Java Developer

- Led the design and implementation of CRM integration with various services, streamlining communication and enhancing data flow efficiency.
- Developed Java code using Spring Framework to build robust and scalable applications.
- Integrated call center applications with customer relationship management (CRM) systems for seamless data exchange.
- Managed extensive tasks involving Kafka and Rabbit MQ for event-driven architectures.
- Utilized Oracle Siebel, Mongo DB, and Postgre to ensure seamless data management and retrieval.
- Conducted extensive testing of migration scripts to ensure data integrity and accuracy after each update.
- Developed comprehensive error handling mechanisms to identify and resolve issues proactively.
- Spearheaded the implementation of unit tests and load tests using Jmeter, ensuring high code quality and performance.
- Led the CI/CD process with Kubernetes, automating deployment and minimizing human intervention.
- Implemented Elastic and Lens for efficient log management and system monitoring.
- Effectively managed tasks and assigned responsibilities to Junior developers, fostering a collaborative team environment.
- Conducted interviews and participated in personnel selection to build a highly skilled development team.

Major Independent Project:

Developed an internal team library that accelerated the creation and functionality of new microservices by 80%. The library provided a standardized set of tools and utilities that significantly reduced development time and improved code consistency.

Additional Achievements:

Created multiple microservices from scratch to integrate CRM and external services, enhancing

overall productivity and data synchronization.

Developed various auxiliary services to support the team's development process, optimizing workflows and increasing efficiency.

IT, System Integration, Internet

- Software Development

Fullstack developer, TeamLead

- Led and successfully executed complex projects involving diverse technology stacks.
- Managed cross-functional teams to deliver high-quality products within stipulated timeframes.
- Devised and implemented effective task allocation strategies, optimizing team productivity.
- Ensured superior quality of project deliverables by adhering to best practices and writing detailed Technical Specifications (TS).
- Collaborated closely with clients to understand their needs and aligned prototypes and functionality accordingly.
- Successfully delivered an information system for the border service, enabling seamless data management and interactive online visualization.
- Spearheaded the development of a cutting-edge medical institution control system, processing 50-100 thousand requests per second with agile data aggregation and editing capabilities.

Front-end: React + Redux, VueJS, Angular.

Back-end: Golang, Java.

Major Projects:

Border Service Information System:

Developed a data-rich internal Information System for the border service. This project involved building services and implementing analytics with interactive online visualization.

Medical Institution Control System:

Led the development of a system to monitor medical institutions, enabling real-time response and management of medical processes. The system processed 50-100 thousand requests per second, aggregating and editing data as required.

About me

Having completed my university education in Canada, I have acquired a comprehensive knowledge base, encompassing the latest technological advancements in software development.

Beyond my expertise in software development, I possess valuable experience in marketing, social media management, and promotion, allowing me to have a deeper understanding of market trends and dynamics.

Inspired by creative aspirations, I have also successfully ventured into directing and acting, adding an extra dimension to my skillset. This diverse background enables me to approach projects with innovative and artistic thinking, contributing to the creation of unique and engaging user experiences.

Continuous growth and improvement are at the core of my values. I embrace new challenges with enthusiasm and tirelessly explore new methodologies and tools to enhance efficiency and deliver high-quality work.
